

INVESTMENT PORTFOLIO ALLOCATION SUMMARY

The table below provides a clear breakdown of how your current and proposed investment portfolio is distributed across the various investment strategies. This allows you to see at a glance the balance between different types of investments and how they work together to support your overall Personal Investor Profile.

The extent to which an investment's value fluctuates over time - rising and falling - is known as volatility, which is one way to assess risk. Investments with higher volatility typically have the potential for more substantial long-term gains, but they also carry a higher chance of significant short-term declines.				
Income	Stable	Balanced	Growth	Fully Offshore
Description				
Investors seeking steady income with minimal fluctuations in portfolio value. Primary focus is portfolio stability, income and capital preservation.	Investors seeking stable returns above inflation with some tolerance for short-term fluctuations in portfolio value. Primary focus is growth above cash, income and preservation of real capital over the medium to long term.	Investors seeking meaningful return above inflation with tolerance for short to medium term portfolio fluctuations. Primary focus is long term capital growth.	Investors seeking substantial capital growth with no concern for short-term fluctuations in portfolio value. Primary focus is long term capital growth offered by equity markets.	Investors seeking exposure outside of South Africa. Primary focus is preservation and/or long-term capital growth in hard currency with tolerance for fluctuations in portfolio value from both currency changes and/or market movements.
Key Risks				
Returns may not outperform inflation after tax and are sensitive to changes in interest rates.	Exposure to short-term market volatility, potential capital losses due to equity and property holdings, and sensitivity to interest rate movements.	Subject to short- to medium-term volatility, potential capital losses, interest rate risk, equity market risk and offshore currency risk.	Higher short- to long-term volatility, potential capital losses from greater equity market exposure, offshore currency risks.	Higher short- to long-term volatility, potential capital losses from equity market exposure and offshore currency risks.
Return composition				
Interest	Interest Dividends Capital Growth Currency	Interest Dividends Capital Growth Currency	Dividends Capital growth Currency	Interest Dividends Capital Growth Currency
Indicative asset allocation				
Cash / Bonds 85 - 100% Equity / Property 0 – 15%	Cash / Bonds: 50-80% Equity / Property: 20-50%	Cash / Bonds: 25-60% Equity / Property: 40-75%	Cash/ Bonds: 0-10% Equity / Property: 90-100%	Depending on specific investment objective.
Minimum Recommended Investment Term				
1 - 2 years	>3years	>5years	>7 years	Depending on specific investment objective
Investments carry the level of unpredictability and uncertainty regarding the returns you might receive. Less risky investments have a narrower range of potential outcomes and more risky investments have a wider range of potential outcomes. It is important for you to align reasonable return expectations with your risk tolerance and time horizon. Investment returns cannot be guaranteed. The returns below are indicative and not based on any market forecasts.				

Best Return over 12 months
